

HTML INFORMATION

INFORMATION

- Html is hyper text markup language.
- It is use to design web page using markup language.
- html was created by Tim Berners - Lee in 1991.

STRUCTURE OF HTML

- The basic structure of a HTML :

HTML Page Structure

```
<!DOCTYPE html>    ← Tells version of HTML
<html>             ← HTML Root Element

<head>             ← Used to contain page HTML metadata
  <title>Page Title</title> ← Title of HTML page
</head>

<body>             ← Hold content of HTML
  <h2>Heading Content</h2> ← HTML heading tag
  <p>Paragraph Content</p> ← HTML paragraph tag
</body>

</html>
```

Advantage and Disadvantage

- Advantage:

Html use to hyper text markup language.

It is supported by browser.

It can be integrated with other language like css, javascript, etc.

- Disadvantage:

Html can only create a static web page. For dynamic web pages, other languages have to used.

A large amount of code has to be written to create a simple web page.

BASIC HTML

- LIST : It is use to create a list in document.
- There are two types of list:
 - order list : it was a order of a item does matter
 - Unorder list : it was a order of a item doesn't matter
- Comment:
 - The comment is hide on web page.
 - It was only use to describe to web page contant.
 - It was defined (!) mark.
 - Two types of comment : single line and multiple line

HTML EDITORS

- Html editor is a software tool.
- It is use creating and editing in html code.
- There was a two types of editors:
 - 1.WYSIWYG editors
 - 2.TEXT BASE editors
